16. Joyce B. Tritt, RN – School Nurse – Epstein School, GA
17. Brenda Strople, RN – Charleston County School District, SC
18. Donna Sopko RN - School Town of Munster, IN
19. Joy Sunday RN– Nurse Supervisor, Valparaiso Community Schools, IN

Admin Program:

Security

2098 – A user group restricted to only View Letter Maintenance was able to edit and save changes to form Letters and referral letters. This has been corrected. User with rights to “View only” will be able to open and view the letter, print a group form letter, but if any changes are attempted, the “Save” function is disabled. **No changes can be saved by anyone with View only rights in Letter Maintenance.**

1782 - When a member of a User Group who was authorized to **view only** on Items Scheduled, Prescriptions and Prescription Administration was set as the “Default Examiner”, that member was able to administer a prescription. This has been corrected. A user who tries to administer or Quick Admin a Prescription and has rights to View only, will receive an error message that lets them know they are not authorized to add a prescription administration. **A user with View only rights cannot add a prescription administration.**

5.6 SP3 Hot Fix D Release Notes

Lists/Static Drop-down List Maintenance

1925 – Static drop-down item were enhanced so if unchecked, but previously used, the saved events continue to display the static list item initially saved. This was seen most often if a Special Need Treatment was unchecked. When the Special Need Admin containing the “turned off” static list item was discontinued, the Treatment was blank. This resulted in the user being unable to copy the SN Admin because the required field was blank. We have enhanced this condition so that previously documented data remains as initially documented. **When a previously used item in the Static drop-down is “unchecked” (not available for use), a SN Admin where that static drop-down item was documented prior to it being unchecked, will continue to reflect the item in the documented event.**

The following Static Drop-down list items were added.

Event Stuff

Actions List added:

- Notify Athletic Trainer
- Notify Child Protection Services
- Notify Student Services
- Nursing Services Form Completed

Dispositions List added:

- Dismissed to Parent/Guardian
- Dismissed to Other Approved Person/Relative
- Drove Home with Parent/Guardian Permission
- Sent to Student Services
- Left by Cab
- Home by Cab

Locations List added:

- School Clinic

Ref'd By added:

- Special Education
- SST Team/504 Committee

Results/Outcomes List added:

- Could not Test
- Referral Incomplete
- Under Treatment

Incident

Body List added:

- None
- N/A
- Throat

Incident Contributing Factors List added:

- Relative/Guardian

- Pass
- Fail

Text Drop-down List Maintenance

The Manufacturer list was adjusted to allow and save a manufacturer added to the list, however , it does not add to the Vaccine Manufacturer list display when administering a specific series dose admin. Once saved it will display only on the Immunization History's Other tab screen or on the Immunization Dose Admin screen when "Other" has been checked

5.6 SP3 Hot Fix D Release Notes

Main Program

File/Merge People

2005 - We alphabetized the list of schools in the drop-down for schools on the Merge People screen.

Toolbar/Global Templates

2084 Global Templates were enhanced for Educational Sessions, Counseling Sessions, Prenatal Visits and Postpartum Visits to enable them to save more than two Handouts or Educational Topics.

Items Logged/Educational Sessions

2260 – We had Educational Sessions showing on Items Logged for some users who had a particular school unchecked in View/User Options **and** we had some users who could not see the Educational Session they entered for a school they had checked in View/User Options. This issue is corrected. **Users set to view Items Logged for the applicable schools checked will see the Educational Sessions logged for the appropriate school as checked in View/User Options.**

New Individual Items

Prescription Admin

1766 – An enhancement was made to the Prescription Admin for those customers who document billing. **If the “IEP” field is not checked in Prescription Maintenance, then, when the Prescription is administered, the Billing screen will not automatically check the IEP field. Special Need Admin already works this way.**

PRN Prescription Admin

2168 – Previously a prescription set up a “PRN/As Needed” was moved to inactive status on the PRN End Date. This was only for PRN/As Needed prescriptions. **This release requires a prescription set up as “PRN/As Needed” to remain active until the end of the Prescription Ending Date.**

Special Need Admin

1796 – Updated tabbing order of Special Need admin screen.

1797 – **The Special Need Admin screen for Diabetes Care has been enhanced to allow user to enter actual readings from a Glucose meter, such as HI, LO or High or Low in the glucose Reading fields.**

1844 – **The Special Need Admin screen for Diabetes Care has been enhanced to allow for a decimal to enter fractional CHO.** A limit of 2 characters after the decimal has been set, so only 2 digits past the decimal can be saved for this field. Even if the 3rd digit past the decimal is entered, only two digits past the decimal can be saved. This data appears in the appropriate detail reports.

5.6 SP3 Hot Fix D Release Notes

Maintenance

Prescriptions

2011 – The “Copy Prescription” was enhanced so if an Admin user deleted a Prescription Medication name from the Text List items and the discontinued Prescription is copied, the Medication name that was deleted will no longer appear in the Copy Prescription Medication name field.

It is important to note that:

- If the Prescription Medication list is a “locked” list the list will remain a locked list on the Copy Prescription screen.
- If the Prescription Medication list is an “unlocked” list, the deleted medication name will no longer appear, but the user can enter a new medication name that is not on the list (because the list is unlocked).

2134 – Copy Prescription and Copy Special Need Admin were both enhanced to reflect the name of the person who is copying the Prescription or Special Need Admin instead of the person who initially set the Prescription or Special Need Admin.

Student

2207 – Student History was only displaying about 12 lines of data and the scroll bar on the right side was inactive preventing users from scrolling down to see additional data on this screen. **The scroll bar has now been activated.**

Student Care Plan

2273 – If a user selected “New” to create a new Care Plan, changed their mind and selected “Close”, then changed their mind again and selected “New” again a RTE occurred. This has been corrected. If the user does the steps described above a pop-up message will display: “To create New Student Care Plan please close this window and try again.”

Bio-Surveillance

2185 – **Bio-Surveillance now generates an alert if the ‘and/or’ is used for the Symptom Conditions.** Now when an Alert is set with one system group and one symptom condition that they must have and another system group set with OR symptoms the alert will trigger.

Sessions

2272 – **An Educational Topic name that has a single quote in the name will now allow the session to be edited once saved.**

Help

There were several broken links in Help throughout the Main program that have been corrected.

5.6 SP3 Hot Fix D Release Notes

Reports Program

Category 100 Reports

1892 – Report 118 Sort By and Page break functions work correctly.

2138 – Report 118 has enhanced by adding a “Last Modified Date: to the Sort by section.

Category 200 Reports

1779 & 1798

- We enhanced the Selection Criteria by adding Sequence to Report 200 – Office Visits Summary Report and Report 210 – Office Visit Detail. The Selection Criteria provides a drop-down of All Visits, Initial Visit or Return Visit.
- We also added “Sequence” as a line item in Report 200 – Office Visit Summary (Sequence was already part of Report 210 – Office Visit Detail).
- 1890 - We enhanced report 201 – Office Visit Details to show , if the field was left blank, the Pulse Rate and Respiratory Rate fields as blank instead of a zero.
- 2001 – Report 201 was adjusted to display the correct Schedule type for Standing Order Admin events. Previously it shows all Standing Order Admin events as “Scheduled” instead of as “PRN/As Needed”.

Category 300 Reports

- 2243 – Report 300 when run for Non-students or Faculty Only person types repeated the vaccine series multiple times. This issue was not present when the report was run for “Student Only”, so not many users would have noticed, as we do not calculate any immunization compliance for Non-Student or Faculty person types.

Category 400 Reports

- 1785 – Report procedure now sorts by Examiner.
- 2249 – Report 409 – UnReconciled Scheduled Items has been enhanced to show only items from the respective school or schools selected rather than all schools regardless of the selected schools
- 1903 – Report 409 – “Prescription Inventory Adjustment,” has been eliminated as a Selection Criteria from the Event Type drop-down list.

Category 500 Reports

- 2187 – Report 508 – Special Problem Special Need Details has been enhanced to show the entire Comment History.
- 1918 – Reports 513 –Administered Prescriptions Detail and Report 514 - Administered Prescriptions Summary have both been enhanced to display the entire Comment entered.

Category 500 Reports

- 1949 – Administered Special Needs Detail was enhanced to show the Carb Intake Notes when documented.
- 1857 – Report 509 – Special Problem Details has been enhanced to show the entire Comment History.

5.6 SP3 Hot Fix D Release Notes

Category 900

2227 –904 Massachusetts Monthly Activity Report was enhanced in this release to include the new drop-down list items. The new revised report was not reformatted for this release since the State is making more changes to the report; we will wait until all changes are approved before reformatting this report. A separate update will be done to provide the revised report

Category 1000

1373 – Report 1010 Risk Management Summary was enhanced to display all Incident Comments on the report.

Claims Program

1996 – We enhanced the Print Preview for the Repair Billing Errors application by creating a new Crystal Report.

Claims Program/Repair Billing Errors

An enhancement was added to allow users to rebill rejected claims. Also, an enhanced, updated list of error messages have been added. If there are multiple issues with a claim, users will be able to see all errors pertaining to a claim.

IT

2176 –We enhanced the stored procedure to remove records from service packs table for obsolete client releases and updates. This allows distributed installs to keep the correct order with posted updates.
